

# Every year, Dr. Lee prescribes a breath of fresh air for his lawn.

Aerating your lawn gets oxygen to grass roots and soil critters—which make more nutrients available for free. It improves drainage and root growth, loosens compacted soils, eliminates weeds, and dispatches thatch.

Use a spading fork, rent a machine, or hire a professional. It's the best thing you'll ever do for your lawn. Call **240.777.7700**. Or visit:
